Transitions® Vantage™ ADAPTIVE LENSES

Introducing revolutionary Transitions® Vantage™ lenses

They darken. They polarize. They are your everyday lenses, reimagined. There are clear lenses that can darken. There are sunglasses that are polarized. But never before have **everyday eyeglass** lenses been able to darken **and** polarize in bright, outdoor light. **Until now.**

Breakthrough variable polarization technology

We took the traditional Transitions lenses you know and love and added variable polarization – polarization that increases as the lenses get darker. It's something brand new. Groundbreaking.

As Transitions Vantage lenses get darker, the polarization increases. And that means your vision gets crisper and sharper. Alternatively, as the lenses get lighter, the polarization decreases at the same time.

Perfect choice for everyday lenses

Transitions Vantage lenses are designed for everyday wear as they conveniently adapt from virtually clear indoors to darker and increasingly polarized outdoors.

Noticeably crisper, sharper vision

Bright sunlight can cause glare when light scatters off reflective surfaces, which causes discomfort and dull, washed-out images. Polarization filters this light, so you get better clarity.

See for yourself:

- Outdoor vision is noticeably crisper
- Glass and water look more transparent outdoors
- Glare is reduced – even in the brightest sunlight

From virtually clear indoors to darker and increasingly polarized outdoors
